Exp: 4 Local area network using a switch and ethernet cables in your lab.

Aim:

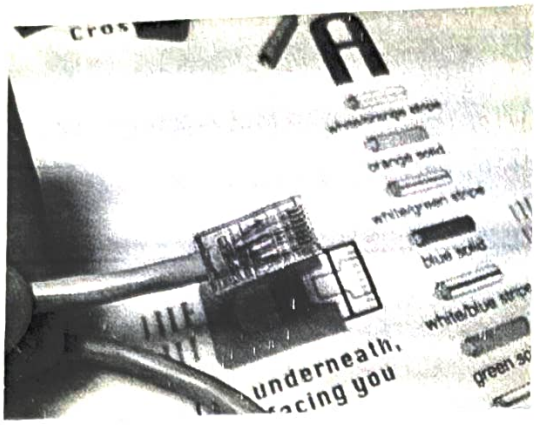

Setup and configure a LAN (Local area network using a Switch and ethernet cables in your lab.

How to setup a LAN:

- Step 1: Plan and design an appropriate network topology taking into account network requirements and equipment location.
- Step 2: You can take 4 Computer, a switch with 8, 16 and 24 ports which is sufficient for network of this size, and 4 ethernet cables.
- Step 3: Connect your computer to network switch via an ethernet cable, which is as simple as plugging one end of the ethernet cable into your computer and the other end into your network switch.
- Step 4: Check connectivity using the ping command.

- Arrange the wires evenly in order, trim any uneven ends insert them into RJ45 plug with the clip facing away and gold pins toward you

- the wires in the plug are inserted into the crimping tool and pushed down.

Result :

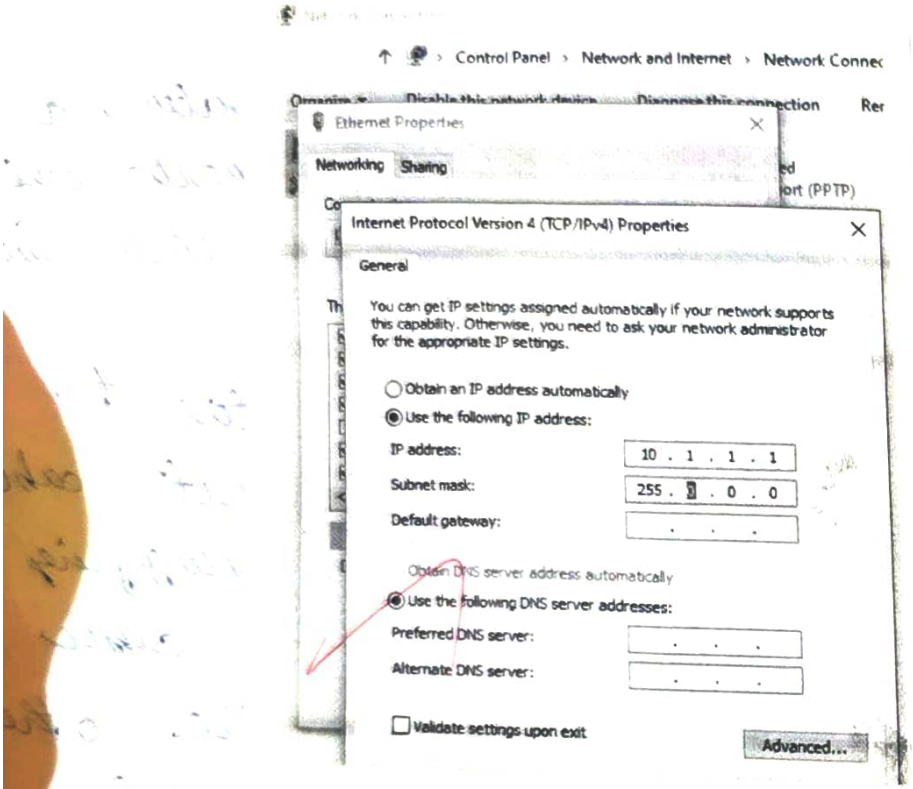

study of different types of network cables through cable and crossover is done successfully.

5) Share a folder on one computer with other computers in the LAN.

6) Access the shared folder from the other computers.

4) Share connection using with other computers in the LAN

8) Access the shared folder with other computers.

Result:

A LAN (Local area network) using a switch and ethernet cable has been setup and configured.
